Survey of True Lines in Sections 27 & 35, T38S, R3E, W.M.
Jackson County, Oregon

Narrative description to comply with Par. 209.250, O.R.S.

for: Bureau of Land Management, Portland Service Center,
P.O. Box 3861, Portland, Oregon 97208

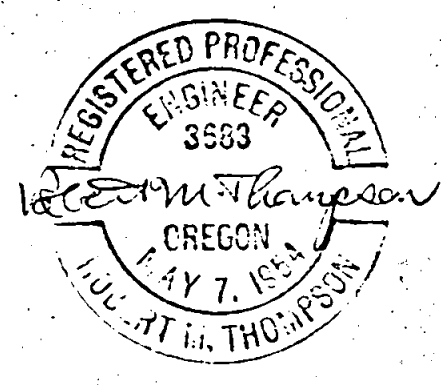

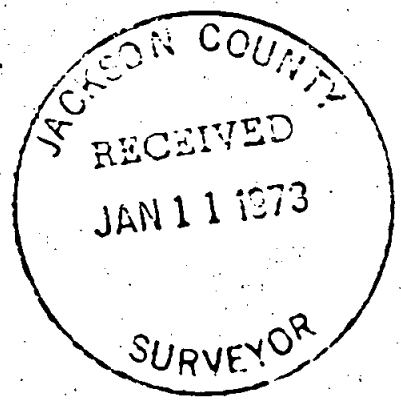

Purpose: To establish and mark true lines and temporary 1/16 corners, as
shown on my map, in accord with instructions from B.L.M.

Procedure:

Random East-West and North-South center lines of Section 35 were
run for control, and to determine the position of the center of the section.
The West halves of the North, and South lines of this section were also run
as random control lines. The position of the center of the section was then
determined, in order to check the position of the CW 1/16 S corner. Positions
for the W 1/16 S $\frac{26}{35}$ and W 1/16 S $\frac{35}{2}$ corners were also determined.

The East line of Section 27 was run as a random line, and the
position of the S 1/16 S 27+26 corner was determined. True lines and temporary
corners were then marked, set, and referenced, as shown on my map, for both
Sections 27 and 35.

Government corners found were verified with U.S.G.L.O. and B.L.M.
and Jackson County Surveyor's file records. Bearings were determined from
solar observations taken at the NE Corner of Section 27, and the North and
South $\frac{1}{4}$ corners of Section 35.

June 28, 1972
