PROCEDURE: Our Survey was accomplished by running random closed traverses to all section and 1/4 section corners that were monumented with Government Land Office monuments, or were re-established from existing evidence. The traverses were completed using a Kern, DKM2A Theodolite and a Hewlett Packard HP3800 Distance Meter. The traverses were run past the approximate locations of the desired corners. The locations of the desired corners were calculated and monuments set from the traverse line by means of a Kern DKM2A Theodolite and a 100 foot steel tape and closed back to a separate point of the main traverses.

All corners and their accessories found and/or established during this survey, together with field distances and bearings are shown on the attached map which by reference is made a part hereof.

I certify that this work was accomplished under my direct supervision.
