PRODEURE:

All corner data was obtained and evaluated. In an effort to search for the missing corners we traversed from the Section Corner common to Sections 1, 2, 11, and 12, south to the Section Corner common to Sections 13, 14, 23, and 24. Likewise a traverse from the existing Section Corner common to Sections 12 and 13 west to the Section Corner common to Sections 10, 11, 14, and 15 gave us some idea where to start looking for the Quarter Corners common to Sections 11 & 12, 12 & 13, 13 & 14, and 11 & 14. A stone scribed " $\frac{1}{4}$ " was located at the Quarter Corner common to Sections 11 and 14. No evidence was found at the other corners.

The Quarter Corner common to Sections 23 and 24 and Section Corner common to Sections 23, 24, 25, and 26 was searched for in a similar manner after determining the possible location by running south from the Section Corner common to Sections 13, 14, 23, and 24 to the Quarter Corner common to Sections 25 and 26 and west from the Quarter Corner common to Sections 24 and 25 to the Quarter Corner common to Sections 23 and 26.

The Quarter Corner common to Sections 22 and 27 was found by traversing between the Section Corners to the east and west and determining an approximate location. Note: Corner had been found by T. Newcomb in 1973.

All corners found were tied by closed traverses and posting of U.S. Forest Service property computed by offsets from the traverse points.

EQUIPMENT USED:

This survey was performed with a Leitz TM-20 Theodolite and a Mac 1 EDM.
